

SUB-GRANTEE NARRATIVE REPORT

Reporting Period: January–December 2025

Reporting Organisation: NATIONAL PUBLIC TRANSPORT
ALLIANCE (NAPTA)

Date Submitted: 8TH DECEMBER 2025

Reporting to: Kusudi Cause Communication under the Breathe
Nairobi Initiative

Executive Summary

During the reporting period, NAPTA implemented the Breathe Cities Programme with a strong focus on advancing clean air advocacy through sustainable public transport interventions. Key achievements included structured engagement with county governments, transport operators, and civil society organizations to strengthen coordination on air quality and urban mobility actions.

The programme successfully convened stakeholder forums, supported policy dialogue on low-emission transport, and delivered targeted public awareness activities that reached public transport operators and urban communities.

As a result, there was improved awareness of the health and environmental impacts of transport-related emissions and increased stakeholder commitment toward cleaner transport practices. At the community level, the programme stimulated constructive dialogue on behaviour change and environmental responsibility.

While implementation faced challenges related to stakeholder scheduling and approval processes at the county level, these were effectively managed through adaptive planning and continuous engagement. Overall, the programme recorded meaningful progress in strengthening partnerships and influencing clean transport and clean air discourse.

PROGRAMME IMPLEMENTATION OVERVIEW

Objectives

The project aims to improve air quality in Nairobi through a comprehensive communication, advocacy and campaign strategy focused on multi-faceted regulatory approach led by Kusudi Cause Communication Trust. The project involves collaboration with National Public Transport Alliance (NAPTA), Muungano wa Wavijiji and Groots Kenya.

By raising public awareness, empowering communities to participate in policy development, and advocating for effective regulations, the project aims to create a collaborative environment for tackling air pollution in Nairobi. This effort will complement the development of regulations to enforce relevant Nairobi City County Acts, ensuring Nairobi's population becomes a key supporter and driver of enhanced regulations fostering transformative change.

Milestones & Results

During this reporting period, the Breathe Cities Programme recorded tangible progress toward its objectives, delivering practical interventions that directly support clean air and sustainable urban mobility goals:

- ❖ **City-Level Engagements:** Conducted hands-on consultations with county transport and environment departments, leading to actionable commitments for reducing emissions in urban transport corridors.
- ❖ **Public Transport Operator Involvement:** Engaged over 150 operators through targeted workshops, resulting in voluntary adoption of cleaner vehicle practices and increased awareness of operational measures to reduce emissions.
- ❖ **Community Outreach and Awareness:** Implemented interactive awareness campaigns in urban neighbourhoods, reaching residents and commuters with practical guidance on sustainable transport choices and the health impacts of air pollution.
- ❖ **Knowledge Sharing and Capacity Building:** Delivered focused technical sessions for local government officials and transport stakeholders, providing tools and frameworks to integrate air quality considerations into everyday planning and operations.
- ❖ **Policy Influence:** Contributed practical recommendations during policy dialogues, enabling local authorities to incorporate emission reduction measures in urban transport planning.

COMMUNICATION & OUTREACH

Stakeholder & Community Engagement

During the reporting period, NAPTA actively engaged communities and local stakeholders to ensure inclusive participation in the Breathe Cities Programme. NAPTA spearheaded targeted workshops, focus group discussions, and awareness campaigns with community leaders, youth, women, and marginalized groups to raise awareness of air quality and sustainable transport practices.

Additionally, NAPTA participated in policy and regulatory development and amendment forums, held in conjunction with city officials and other stakeholders, where it positively contributed to discussions on policies addressing vehicular emissions. These efforts ensured that programme interventions were community-driven, equitable, and informed by practical policy considerations, bridging grassroots engagement with strategic policy dialogue.

Social Media Highlights

<https://www.linkedin.com/feed/update/urn:li:activity:7396771355070849024>

The video highlighted transport emissions as a leading contributor to poor air quality in Nairobi while positioning electric motorcycles as a practical and scalable solution for reducing pollution, lowering rider operating costs, and transforming urban mobility. The message emphasized the role of collective action and sustainable innovation in building a cleaner city. The content was shared with an educational and advocacy focus, reinforcing NAPTA's commitment to promoting clean air and sustainable transport solutions through digital engagement.

What do you think contributes MOST to the dirty air in our cities?

You can see how people vote. [Learn more](#)

The poll generated strong audience interaction, with a clear majority of participants (83%) identifying **vehicular emissions** as the leading contributor to dirty air in our cities. This overwhelming response highlights a high level of public awareness around transport-related air pollution. **Waste burning** followed at 17%, while **industrial emissions** received no votes, indicating a strong public perception that everyday transport is the main air quality challenge. Overall, the poll achieved meaningful engagement and provided valuable insight to guide future advocacy and awareness campaigns.

REFLECTIONS AND LEARNING

The Breathe Cities Programme achieved notable successes during the reporting period. Strong community engagement, particularly with youth, women, and marginalized groups, proved highly effective in raising awareness and stimulating practical behaviour change around cleaner transport choices. The collaborative workshops and forums provided valuable spaces for dialogue, allowing diverse voices to influence programme activities and reinforcing local ownership of clean air interventions. Participation in policy and regulatory forums also enabled NAPTA to contribute meaningfully to discussions on vehicular emissions, ensuring that technical and community perspectives were considered in decision-making.

At the same time, some areas could be strengthened. Coordination across multiple stakeholders sometimes slowed progress, and more structured follow-up mechanisms would help ensure that commitments made in forums translate into tangible actions. Additionally, while community engagement reached many participants, extending outreach to harder-to-reach groups and informal transport operators could enhance inclusivity and impact.

An unintended outcome of the programme was the heightened interest from local youth and community organizations in independently initiating clean air campaigns, demonstrating a ripple effect where awareness and ownership extended beyond formal programme activities. This underscores the programme's potential to inspire longer-term behaviour change and community-led initiatives.

RISK MANAGEMENT AND MITIGATION

During the reporting period, NAPTA encountered challenges related to engaging public transport operators, including varying levels of awareness and readiness to adopt cleaner vehicle practices. To address this, NAPTA facilitated targeted workshops and awareness sessions, sharing practical guidance on reducing vehicular emissions and promoting sustainable transport choices. Coordination with operator associations and community leaders helped ensure meaningful participation and representation. While these actions significantly improved engagement, continued support and follow-up with transport operators will be essential to sustain behaviour change and fully integrate low-emission practices across urban transport networks.

SUSTAINABILITY & NEXT STEPS

NAPTA is anchoring the Breathe Cities Programme activities for sustainability by strengthening the capacity of public transport operators, driver associations, and community representatives to continue promoting cleaner and safer transport practices. Through targeted training, awareness sessions, and continuous engagement, these stakeholders are equipped to champion low-emission practices and influence peers beyond the programme's direct interventions.

For the upcoming period, NAPTA will focus on expanding outreach to additional transport operators, providing follow-up support to ensure adoption of cleaner vehicle practices, and facilitating peer-to-peer learning among operators and community leaders. This approach ensures that the behavioural and operational changes initiated during the programme are sustained within the public transport sector over the long term.
